

# Amazon delivered a mixed bag in Q4

## Article

**The news:** Amazon's Q4 results were a mixed bag as its revenues beat [expectations](#) despite a decline in its ecommerce sales.

- **The company's revenues grew 9% year-over-year (YoY) in Q4 to \$149.2 billion.** Refinitiv's estimates expected the retail giant's revenues to be \$145.42, and Amazon's guidance had been between \$140.0 billion and \$148.0 billion.
- **But its ecommerce revenues fell 2% to \$64.53 billion from \$66.08 billion a year earlier.**

- One clear bright spot was the company’s lucrative advertising business, which grew 19% to \$11.56 billion, outpacing StreetAccount’s projection of \$11.38 billion.

## Amazon Ecommerce Channel Ad Revenues

US, 2020-2024

*Note: includes advertising that appears on desktop and laptop computers as well as mobile phones, tablets, and other internet-connected devices, and includes all the various formats of advertising on those platforms; net ad revenues after companies pay traffic acquisition costs (TAC) to partner sites; excludes advertising on Amazon-owned media properties like Amazon Fire TV and Twitch, and advertising placed on non-Amazon-owned properties*

**A warning sign:** The decline in ecommerce revenues for the fourth time in the past five quarters is a clear warning sign for Amazon—particularly after the retailer attempted to goose sales via the launch of its [Prime Early Access Sale](#).

- That said, there were some good signs. The company's third-party seller services revenues grew 20% YoY to \$36.34 billion in Q4, and subscription services—which is mainly subscriptions to its Prime membership—grew 19% to \$11.55 billion during the quarter.

**Getting its costs in check:** Amazon has been on an ongoing push under CEO **Andy Jassy** to focus squarely on its core businesses—like ecommerce, grocery, advertising, and AWS—and aggressively cut costs wherever possible.

- That resulted in several large-scale cost-cutting measures such as **laying off** roughly 18,000 staff, slowing the opening of new warehouses, abandoning some facilities, and selling a Bay Area office complex that it had planned to convert to a logistics facility.
- It also made lower-profile changes including beginning to **charge** US Prime members for Amazon Fresh grocery orders under \$150 and sunsetting its charity program, **AmazonSmile**.

**Looking for growth:** At the same time, Amazon continues to look for new growth opportunities.

- It recently expanded the availability of its **Buy with Prime** offering, which enables retailers to use Amazon's fulfillment and payments services.
- It has also sought to better align its businesses. For example, Amazon-owned **Zappos** recently began **offering** label-free, box-free returns at Amazon-owned **Whole Foods Markets** nationwide.
- Looking abroad, it launched a partnership with Bengaluru-based cargo airline **Quikjet** to launch its **Amazon Air** air freight service in India.

**The big takeaway:** Amazon is in the midst of its most difficult stretch in decades.

- While it is taking steps to correct its course, turning around such a large company takes time. That's evident in its Q1 guidance in which it expects net sales to rise between 4% and 8% and operating income to be between \$0 and \$4.0 billion.
- That said, there were some positive signs, including the continued strength of its retail media business, which we estimate accounted for nearly 78% of US retail media ad spending last year.

## Retail Media Ad Spending Share, by Company

US, 2022, % of retail media digital ad spending

### Amazon

77.9%

### eBay

0.9%

### Etsy

0.5%
