

Five Charts: The State of Food Delivery

Not everyone orders food online, but the competition for customers is still fierce

ARTICLE

Krista Garcia

Food delivery, common in urban areas where population is dense and car ownership is low, is expanding to the suburbs and beyond thanks to the rise of digital services connecting users to restaurants.

Diners used to have just pizza and Chinese to choose from, but now their options include fast food, higher-end fare, food carts and even virtual restaurants that serve as commissaries to fuel delivery orders rather than sit-down customers.

Popular restaurants for delivery are even starting to reallocate space to accommodate staging areas and to make up for fewer in-store diners. This follows a similar square footage repurposing trend that is happening in the grocery industry.

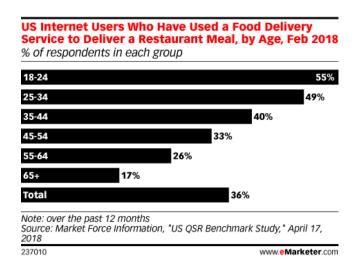

A year and a half ago, a majority of US internet users (52%) looked to a restaurant's own app or website to order food delivery. Grubhub was favored by around one-third, according to Cowen and Company.

Restaurant Del Users, May 201 % of respondents	7	rvices Used	by US Internet

Since then, Grubhub has gained market share due to its 2017 acquisition of Eat24 from Yelp. The company phased out the separate Eat24 ordering platform in August 2018.

Food delivery adoption is very much tied to age. Overall, 36% of US internet users ordered restaurant delivery in the past year per Market Force Information, but it was the under-35 group driving this. Not only do younger users have higher adoption rates, but they also use delivery services more frequently. In a move to capture active Gen Z users, Grubhub bought Tapingo, an on-demand food service for college campuses, in September 2018.

By some measures, though, the average US internet user isn't all that interested in having food delivered. According to a March 2018 TrendSource survey, ordering online for pickup is more popular than delivery, and consumers seem to trust a restaurant's app more than a third-party offering.

On-site meal pickup	through a third	-party app		4.8%
	47.0%	21.8%	17.1% 9	9.3%
Delivery through a th	ird-party app			6.7%

Slightly likely	Very likely			

Click-and-collect also has greater usage than online grocery delivery, since consumers don't mind sacrificing some convenience in order to save on fees. This logic could also be at play concerning food delivery.

That said, a July 2018 Gallup poll showed that 84% of US adults order food for either delivery or takeout at least a few times per month. This is far more frequent than other initiatives retailers are rushing to roll out, like online grocery ordering (15%) or having meal kits delivered (10%).

In September 2018, of the top food delivery services, Grubhub had the most users as well as commanded the highest loyalty, according to Verto Analytics. DoorDash was the closest competitor, while UberEATS and Postmates had far fewer users but more active ones.

	Users (millions)	Sessions per user	Exclusive users (%)
GrubHub	17.2	3	57%
DoorDash	15.5	4	54%
UberEats	8.1	6	47%
Postmates	2.8	7	55%
Note: adults age	2.8 es 18+; based on mon nalytics, "Verto Watch	thly unique users	

The US food delivery market isn't saturated yet. UberEATS is attempting to expand from its urban base to the suburbs and announced last month that it would serve 70% of the US population by the end of the year. Postmates also is growing and added 134 new cities to its roster in October, increasing its coverage to 60% of the US.
