## CVS' new virtual primary care service inches it closer to becoming a healthcare giant

## Article

The news: CVS Health is rolling out a virtual care solution next year to eligible Aetna and Caremark members. The service will allow consumers to get care at a retail clinic, virtually, or

in their home.

The offering, **CVS Health Virtual Primary Care**, is being sold to Aetna fully-insured, selfinsured plan sponsors, as well as clients of Caremark, CVS' pharmacy benefit manager. Eligible members can start using the service next year.

**How we got here:** CVS' telehealth offerings currently include e-clinic and video visit services for general medical care and some chronic disease management. Aetna has offered virtual care solutions for its members for the past decade.

- Last year, CVS and its Aetna health plan arm <u>launched</u> their first co-branded virtual primary care solution (powered by **Teladoc**) to self-funded employers nationwide.
- This service promises free copays for all telehealth visits and select in-person ones for Aetna members, once deductibles are kicked in.

**More on the new offering:** CVS Health Virtual Primary Care gives Aetna's and Caremark's customers another option to roll out to their members—approximately **110 million in total.** 

- Members will be able to receive a variety of services virtually, including primary care, chronic condition management, and mental health support. Members can then choose to have an inperson visit at an in-network provider, if needed.
- CVS' press release is light on details regarding the program's at-home services, though president and CEO Karen Lynch <u>hinted</u> at such expansion during the company's 2021 investor day in December.
- Patients' data will be stored on a dedicated EHR platform, which can be accessed by CVS care team providers and outside physicians.

**The bigger picture:** This is yet another move that beefs up CVS' hybrid care delivery strategy as the retail giant evolves into a healthcare giant.

By intertwining its retail, insurance, and pharmacy divisions, CVS wants more consumers using its healthcare services.

• Even though CVS <u>plans</u> to close the doors on nearly 10% of its US locations throughout the next three years, the company wants to become a front door for care by converting its remaining stores to primary care-like offices.

- Consumers are growing more comfortable with CVS as a healthcare destination due to the pandemic. The company administered more than 32 million COVID-19 tests and over 59 million COVID-19 vaccines in 2021.
- Plus, CVS went from supporting 10,000 virtual mental health visits in 2019 to 10 million in 2021.
